

Public news cybersecurity feeds

Project Title	Public news cybersecurity feeds
Project Summary	Help information security practitioners stay informed about the news that impacts the field.
Country	United States
Agency	Homeland Security Department
DoS Office	N/A
Post	N/A
Section	N/A
Number of Interns	1

Project Description

Develop a web based module that could be added to a standard internal web site or a customer portal. Module goal will be to show the latest cybersecurity news and include a ranking of both what is “hot” (i.e. popular) and what has the greatest criticality/impact. If news can be categorized for different elements: business and or technical groups, then reader should be able to sort/select. News feeds should be from common public sources and also from Fed Govt. sources. Advanced capabilities would include having a standard view/selection, indicating “read/unread”, no longer showing read items, a searchable archive. A second advanced feature would be to have a news scroll/ticker tape style display of critical info. Development can be based on any open-source (free to the government tools with no licensing restrictions on public or custom code.)
